

## **BETHANY COVENANT CHURCH**

Berlin, CT

### **PROJECT DESCRIPTION**

Acentech designed the sound and video systems for this 500-seat church and made architectural acoustics recommendations. The acoustics and materials of the sanctuary itself were a significant consideration in the design, as they had to be complementary. Acentech designed the audiovisual system such that the Church could purchase and use products that were readily available to its contractor.

Acentech submitted the infrastructure requirements first to allow that work to get underway, thus enabling efficient and effectual project planning and completion.

# **Acentech**
